## **Formulae for Present Value**

#### Present Value of Given Amount (Single Amount):

$$PV = FV \times PVF_{(r,n)} \qquad or \qquad \frac{FV}{CVF_{(r,n)}}$$

#### Present Value of an Annuity (Multiple Amount):

**PV** = Annuity Amount 
$$x PVAF_{(r,n)}$$

#### **Present Value of Perpetuity (Infinite Returns):**

## **Formulae for Future Value**

#### **Future Value of Given Amount (Single Amount):**

$$FV = PV \times CVF_{(r,n)} \quad or \quad \frac{PV}{PVF_{(r,n)}}$$

#### Future Value of Annuity (Multiple Amount):

**FV** = Annuity Amount x 
$$CVAF_{(r,n)}$$

#### Future Value of Annuity Due (Multiple Amount):

**FV** = Annuity Amount x [ 
$$CVAF_{(r,n1)}$$
 - 1 ]

#### **Abbrivations Used:**

FV = Future Value PV = Present Value

r = Rate of Return / Inflation

n = Period / No. of Years / No. of Months etc.

PVF = Present Value Factor

PVAF = Present Value of Annuity Factor

CVF = Compound Value Factor

CVAF = Compound Value of Annuity Factor

# **Calculation of Tables though Calculator**

#### For PVF Press the following keys:

#### For PVAF Press the following keys:

#### For CVF Press the following keys:

#### For CVAF Press the following keys:

#### Example-1: Calculation of PVF Table for 15%

#### **Example-1: Calculation of CVF Table for 8%**
